Vurdering •

Nordic Cattle Genetic Evaluation

# DRP

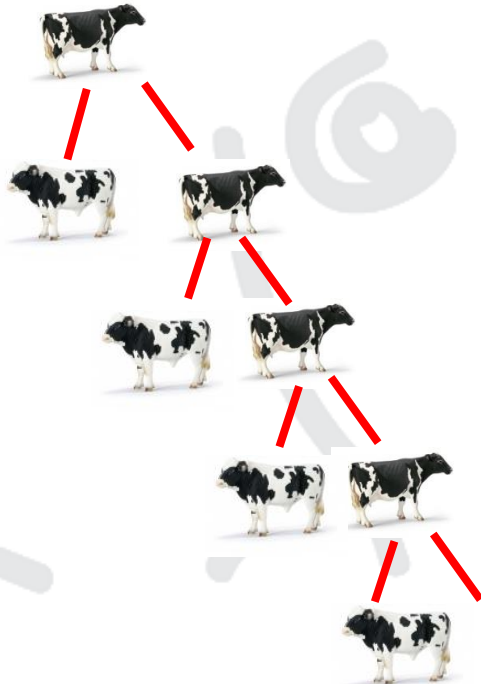

- use of pedigree information for tested animals

- Previous routine: Sire, MGS
- Now: Sire, Dam (Animal model)
- Advantage: DRP are closer to the true yield deviation of the animal

# DRP

- use of pedigree information for tested animals

Now

Previously

Pedigree:  $0,5 + 0,25 = 0,75 + \text{genetic group}$

**NAV**

Pedigree:  $0,5 + 0,25 + 0,125 + 0,0625 = 0,9375 + \text{genetic group}$

Nordisk Avlsværdi  
Vurdering •

Nordic Cattle Genetic Evaluation

# Calculation of BV

## Tested cows and proven bulls with DRP

- $DRP = \mu + \text{Animal} + e$
- Type of output BV depends on pedigree:
  - Genomic pedigree → DGV (genomic value)
  - Traditional pedigree → EBV (traditional value)

**NAV**

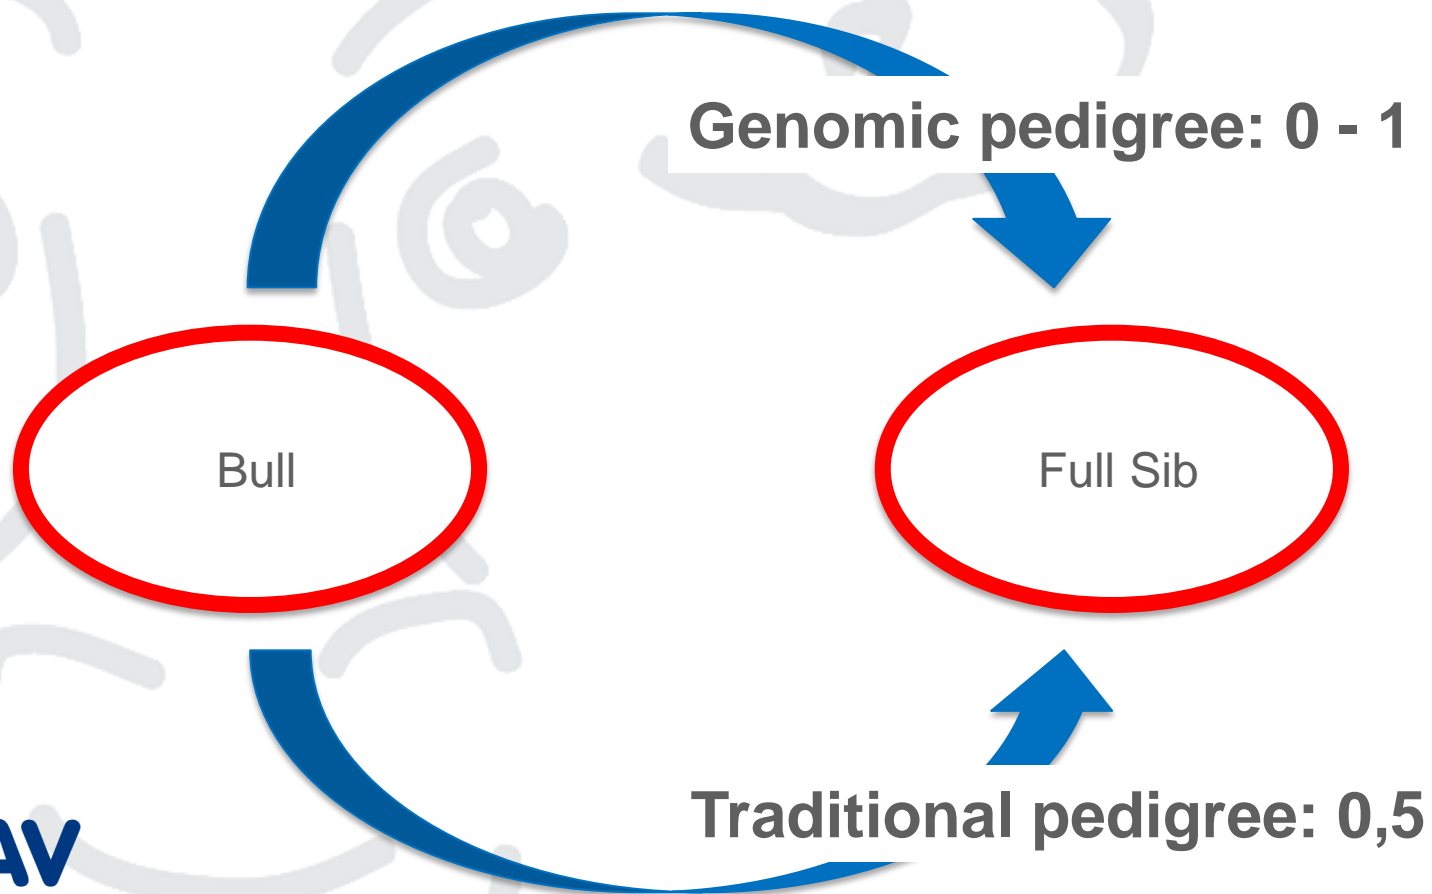

Nordisk Avlsværdis  
Vurdering •

Nordic Cattle Genetic Evaluation

# Pedigree on the basis of SNP

**NAV**

Nordisk Avlsværdi  
Vurdering •

Nordic Cattle Genetic Evaluation

# Calculation of BV

## Tested heifers and young bulls without DRP

- "Missing DRP" =  $\mu + \text{Animal} + e$
- Type of BV depends on used pedigree:
  - Genomic pedigree → DGV
  - Traditional pedigree → Pedigree index

# Blending (GEBV)

- Combines DGV and EBV
- DGV: Pedigree (genomic), performance (DRP)
- EBV: Pedigree (traditional), performance (DRP)

Combination – BUT much overlap of information

New method better to avoid "double counting"  
– makes it possible to include females in reference group

**NAV**

# Reference population January 2015

	Reference population	
	Bulls	Cows
Holstein	27500 <sup>a)</sup>	(8400)
RDC	8150 <sup>b)</sup>	12700
Jersey	2450 <sup>c)</sup>	8550

a) Includes proven bulls from NLD, FRA, DEU, ESP

b) Includes proven bulls from NOR

c) Includes proven bulls from USA

# Genomic information gives higher reliability for candidates!

Reliability for 4 latest birth years of proven bulls compared to reliability on pedigree information

Example:

Validation reliability on DGV 45%

Validation reliability on pedigree 20%

**Extra reliability 25%**

**NAV**

Nordic Cattle Genetic Evaluation

# Implemented GEBV in 2014

Date	Comment
February 2014	Adjustment Holstein longevity
March 2014	US Jersey bulls included in ref population
May 2014	Publication age decreased from 17 month to 10 month
July/August 2014	Cows in reference populations and revised blending method applied for RDC and Jersey.
August 2014	Results from GMACE routine evaluation published
November 2014	Cows in reference populations and revised blending method applied for Holstein yield traits

# Implementation plan GEBV 2015

Date	Comment
February 2015	Cows in reference populations and revised blending method applied for Holstein remaining traits
Spring 2015	All type traits at each evaluation – GEBV for females
Spring 2015	Official GEBV reliabilities
Spring/summer 2015	Young stock survival
2015	Weekly evaluations
2015	Cows in ref for more traits – fertility, claw health, longevity

# More frequent genomic prediction

- Aim GEBV for bull calves available at a younger age than today
  1. Efficient registration of animal and collection of DNA (farmer and VG)
  2. More frequent and faster genotyping (GenoScan)
  3. More frequent genomic prediction (NAV)

**Room for improvement in all 3 steps!**

**NAV**

Nordisk Avlsværdi  
Vurdering •

Nordic Cattle Genetic Evaluation

# Steps in routine genomic prediction

Step	
1. NAV pedigree file	Information from all three countries – only new animals needed
2. Check of pedigree	Has to be solved in the future pedigree assignment program
3. Genotypes from GenoScan	
4. Imputing (FImpute)	Check of pedigree done here as well can handle that part until step 2 is solved
5. GBLUP/SNP BLUP	
6. Blending	
7. Publication	

NAV

Nordisk Avlsværdis  
Vurdering •

Nordic Cattle Genetic Evaluation

# More frequent genomic prediction

- Requirement for weekly evaluations
  - More automatic
  - Establish a simple warning/error detecting system
  - Maybe need for more computer capacity
- or
  - SNP BLUP (require GMACE test run – sept 2015)

**NAV**

Nordisk Avlsværdis  
Vurdering •

Nordic Cattle Genetic Evaluation

# Work ongoing

- **Kevin Byskov and Martha Bo Almskou in cooperation with Timmy Gregers Madsen, AU built stepwise a system up.**
- **Aim to introduce more frequent evaluation during 2015**

**NAV**

**Nordisk Avlsværdi  
Vurdering •**

Nordic Cattle Genetic Evaluation

# Applied research focus 2015

- **One step (MTT)**
  - **Simultaneously use of phenotypes and genotypes in evaluation**
  - **More optimal use of data**
- **Use of extra SNPs added on LD (AU)**
  - **Include information that some SNPs carry more information than other SNPs**

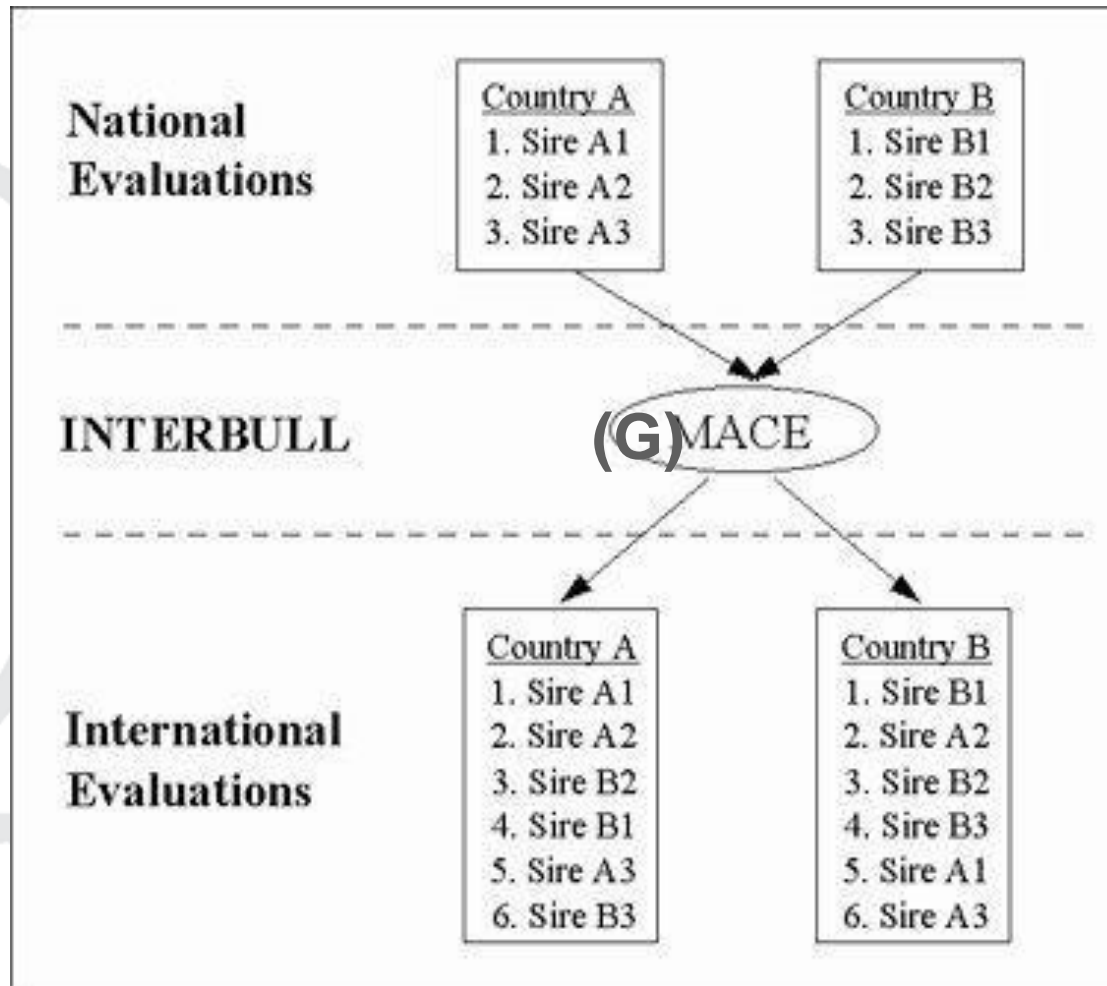

**NAV**

**Nordisk Avlsværdis  
Vurdering •**

Nordic Cattle Genetic Evaluation

# (G)MACE

**MACE use national EBVs based on phenotypes**

**GMACE use national GEBVs based on genotypes**

# MACE versus GMACE

- **Breeding values from MACE and GMACE are expressed on the same scale and comparable on each country scale**
- **All bulls included in GMACE are expressed on all participating countries scale also scales for countries only participating in MACE.**

**NAV**

**Nordisk Avlsværdis  
Vurdering •**

Nordic Cattle Genetic Evaluation

# What has to be published from GMACE?

All countries participating in MACE have to publish:

- International EBVs for all Interbull traits
- Interbull EBVs can be EBVs from MACE or GEBV from GMACE

**NAV**

Nordisk Avlsværdis  
Vurdering •

Nordic Cattle Genetic Evaluation

# Which countries participate in GMACE?

- **December routine**
  - **Australia, Belgium, Canada (not Semex bulls), Germany, DFS, France, England, Italy, Holland, Poland**

**NAV**

**Nordisk Avlsværdis  
Vurdering •**

Nordic Cattle Genetic Evaluation

# Groups of countries (e.g. NLD, FRA, DEU and DFS) exchange genotypes for young AI bulls

- A bull with a genotype in more countries get an GEBV with the same reliability as national bulls on all country scales within the exchange group. *(equivalent to a situation that a bull has daughters in all countries – no conversion by use of genetic correlation)*

and

- A slightly higher reliability on 3rd country scales than if information from GMACE is coming from one country only.
