

News genomic prediction - NAV routine evaluation 2 October 2013

The latest NAV routine genomic prediction took place as scheduled. NAV carried out genomic prediction for Holstein, RDC and Jersey:

Data used in genomic prediction

Genotypes were extracted from the joint Nordic SNP data base September 19th 2013. Interbull information was from August 2013. Nordic phenotypic information used in the genomic prediction was the same as in the 13th August 2013 routine evaluation.

News in relation to NAV genomic prediction

RDC pedigree was updated with some old Swedish pedigree information
